

Kids These Days: How to Design A Successful Summer Internship Program

Summer interns can be a valuable, cost-effective way to complete a lot of work in just a few months. Yet, it can be daunting to structure a productive summer in public works that is also exciting and fun (especially to college or high school students!). Learn from the City of San Pablo Public Works Department experiences with hosting fourteen interns over the past 3 years and receiving the Intern's Choice Award in 2019. This presentation will cover practical tips for advertising, organizing and implementing internship programs.

Presented by: Sarah Kolarik, City of San Pablo

Ms. Kolarik studied environmental science and economics at Stanford University. She started working with the City of San Pablo as a CivicSpark AmeriCorps Fellow and has since been hired on as a full-time Environmental Program Analyst. Her experience with GIS software led her to become the City's "expert" in Cartegraph—the City's asset management system—as well as the organizer and supervisor of the summer GIS internship program.
